## BASE ANTES de tudo

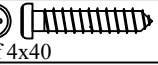

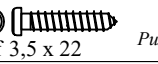

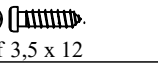

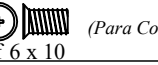

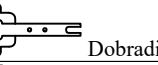

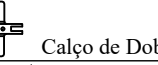

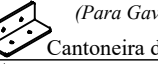

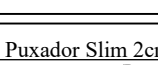

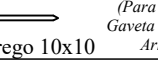

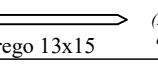

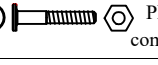

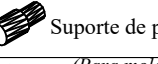

Siga a sequência numérica

Prenda a divisão com cantoneiras pequenas nas molduras. Primeiro coloque a gaveta, verifique se a mesma corre suavemente e só então parafuse as cantoneiras nas molduras, pois assim você conseguirá fazer um pequeno ajuste, caso precise, para que as gavetas fiquem deslizando perfeitamente.

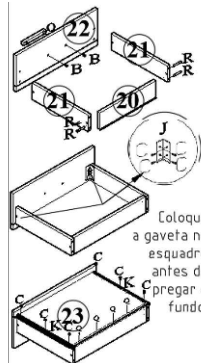

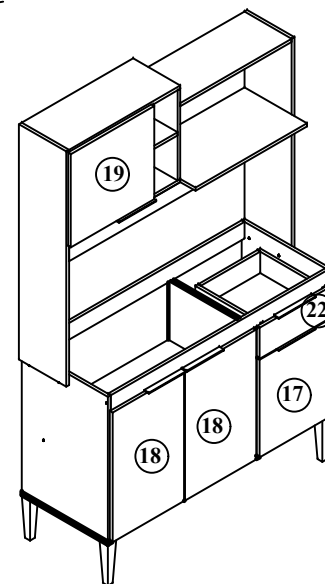

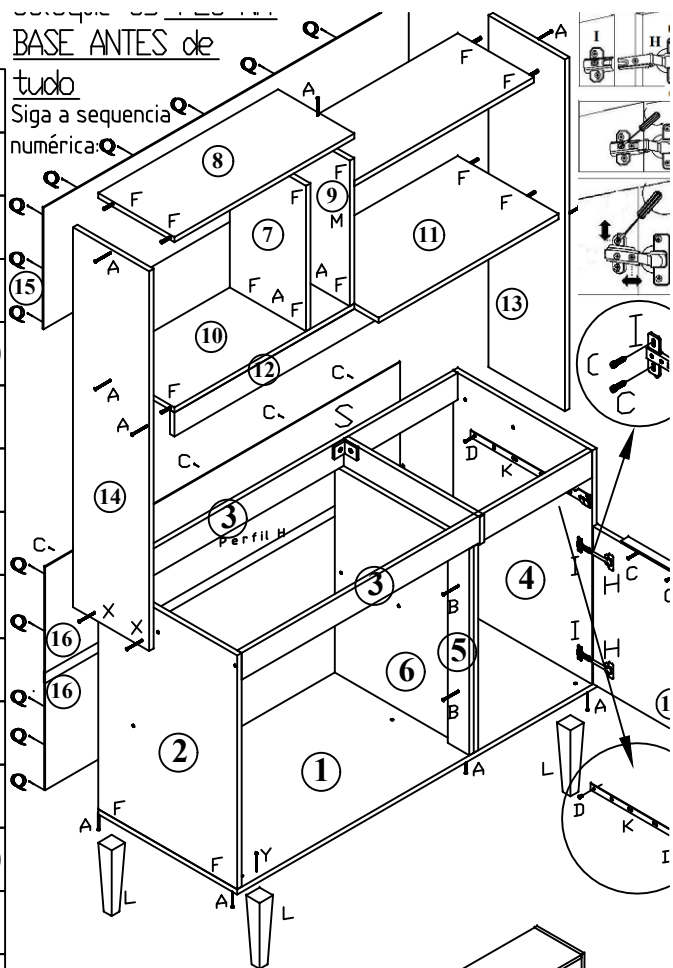

Peças 3 e 12  
NÃO possuem furação nas pontas, alinhe-as com as bordas e parafuse.
